

# **A General Geometry and Calculus; Including Part I. of the General Geometry, Treating of Loci in a Plane and an Elementary Course in the Differential and Integral Calculus**

Filesize: 4.09 MB

## ***Reviews***

*This published publication is fantastic. it had been writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

*(Junius Herman)*

## A GENERAL GEOMETRY AND CALCULUS; INCLUDING PART I. OF THE GENERAL GEOMETRY, TREATING OF LOCI IN A PLANE AND AN ELEMENTARY COURSE IN THE DIFFERENTIAL AND INTEGRAL CALCULUS

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1871 Excerpt: .singular points. Sch.--In giving the above method of tracing curves, it is not meant that the processes there detailed are necessarily to be gone through with in the order given, nor in fact that they are all to be applied in tracing the same curve. These are only means to be used as occasion may require. Again, while these processes are general, and constitute what is usually called tracing curves, there are other methods better adapted to certain cases. Of these we shall give, in the sequel, three; viz., one when the equation can be put into the form  $y = px$  ix), in which  $y = p(x)$  is a diametral locus to that represented by the entire equation; another by transformation from one set of rectilinear co-ordinates to another; and a third by passing from one system of co-ordinates to another, as from rectilinear to polar. But we will first attend to a few examples by the general method. Ex. 1. Trace the curve  $y = ax + bx^3$ . Solution.--We have  $y = x/a + bx$ . On this we observe that for  $x = 0$ ,  $y = 0$ . The curve passes through the origin. For  $y = 0$ ,  $x = 0$ , or--. The curve cuts the axis of  $x$  also at--. b For all negative values of  $x$  between 0 and-- ,  $y$  is real, but beyond--in a negative direction  $y$  is imaginary.  $x = \text{---}$  is the limit of the curve in this direction. But for all...
